# The ALMA observatory and how to use it

Edwige Chapillon

On behalf of the IRAM ARC node

## World wide collaboration

- **Atacama Large Millimeter/Submillimeter Array**
- Europe (**ESO**)
- North America (USA, Canada, Taiwan)
- Eastern Asia (Japan, Taiwan, South Korea)
- Chile

- Main array: 50 x 12 m antennas
- ALMA Compact Array (ACA): 4 x 12m + 12 x 7m
- Frequency range: 30—900 GHz (0.3—10 mm)
- 16 km max. baseline

# Requirements

EUROPEAN ARC  
ALMA Regional Centre || IRAM

1. Detect spectral line emission of CO and CI in a normal galaxy like the Milky Way at a redshift of 3, in less than 24h observation.
2. Image the gas kinematics in protostars and protoplanetary disks around young Sun-like stars at a distance of 150 pc.
3. Provide precise images at 0.1 arcsec resolution

# ALMA

- JAO
  - Main operations
- ARC
  - Interface with user
- ARC node
  - Additional user support

# Morita array (ACA)

EUROPEAN ARC

ALMA Regional Centre || IRAM

## Morita-array (compact array)

- 12 7-m antennas to observe the short spacing
- offered in stand-alone mode starting cycle 4

## Single-dish antennas

- 4 12-m antennas used in single-dish mode to observe the zero-spacing

# Main array

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- 50 antennas, 1225 baselines (**Goal = 45 antennas used**)
- Angular resolution  $\lambda/B$  down to 40 mas (100 GHz), 5 mas (900 GHz)
- 28 (TBC) different antenna configurations, from compact to ~16 km

- **Short spacing ACA observations + 4 single-dish antennas (TP)**
- **Caution: not all projects can have ACA data!**
- ALMA imaging simulator in GILDAS and CASA

## Atmospheric transmission at Chajnantor, pwv = 0.5 mm

### North America

Band 3 (84-116 GHz)  
Band 6 (211-275 GHz)

### Europe

Band 7 (275-373 GHz)  
Band 9 (602-720 GHz)

### Japan

Band 4 (125-163 GHz)  
Band 8 (385-500 GHz)  
Band 10 (787-950 GHz)

Freq. coverage: 30—900 GHz  
Bandwidth: 8 GHz x 2 polarizations

Band 1 (35-50 GHz): Taiwan

# Receivers

EUROPEAN ARC

ALMA Regional Centre || IRAM

- Receiver Bands currently installed on all antennas:
  - Band 3: 3 mm (84-116 GHz)
  - Band 4: 2 mm (125-163 GHz)
  - Band 6: 1 mm (211-275 GHz)
  - Band 7: 850  $\mu\text{m}$  (275-370 GHz)
  - Band 8: 650  $\mu\text{m}$  (385-500 GHz)
  - Band 9: 450  $\mu\text{m}$  (602-720 GHz)
  - Band 10: 350  $\mu\text{m}$  band (787-950 GHz)
- Receiver Bands in development
  - Band 5 : EU 1.5mm (163-211 GHz) started
  - Band 1: TW 7mm (35-50 GHz) planned
- All receivers **8 GHz bandwidth x 2 polar.**

# Correlators

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- 4 units of 2 GHz = baseband
- 4 spectral windows per baseband with compromise bandwidth/resolution
- 1/2/4 polarization products (total number of channels = constant)
- **Caution: data rate limitations!**

| –Leiden Obs. (NL) | + Lisbon (P) Center of Expertise |

# IRAM ARC node

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- **Phase II and f2f support to ALMA**

- Local contact assigned to each project
- Use existing infrastructures and procedures
- Travels to Grenoble funded by IRAM (same rules as NOEMA)
- **Limited staff** (~1 FTE)
- F2F and CS could be in different nodes

	High-Prio.	Fillers	Total	
Cycle 0	14/37	6/17	20/ 54	37%
Cycle 1	24/62	4/22	28/ 84	33%
Cycle 2	49/129	8/45	57/ 174	33%
Cycle 3	52/151	28/92	80/ 243	33%
Cycle 4	53/161	41/123	94/ 284	33%

# IRAM ARC node

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- **Phase II and f2f support to ALMA**

- Local contact assigned to each project
- Use existing infrastructures and procedures
- Travels to Grenoble funded by IRAM (same rules as NOEMA)
- Limited staff (~1 FTE)
- F2F and CS could be in different nodes

	High-Prio.	Fillers	Total	Actually supported
Cycle 0	14/37	6/17	20/ 54	20
Cycle 1	24/62	4/22	28/ 84	28
Cycle 2	49/129	8/45	57/ 174	57
Cycle 3	52/151	28/92	80/ 243	48
Cycle 4	53/161	41/123	94/ 284	64

# User support

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- **Contact Scientists**
  - SB validation for all accepted + fillers projects (> observed projects)
  - Interface between PI and ESO & ALMA
  - Also: check projects status during Cycle
  - helpdesk
- **f2f support for data reduction**
  - Main task
  - Re-calibration
  - Re-imaging
  - Covers most bands & observing modes
  - Travel funding available (for PI affiliated to IRAM funding agencies)  
+ MARCUS (radionet, restarting 2017)
  - No funding for specific computing equipment.
- **Schools, workshops**

# How to use ALMA

## Proposing

The ALMA Director solicits proposals for observing time with the Atacama Large Millimeter/submm Array. The solicitation is done through a [Call for Proposals](#), announced in this Section of the ALMA Science Portal. Supporting documents and associated software is made available to the community at the time of the call.

Proposals for use of Director's Discretionary Time (DDT) must currently be submitted using the Cycle 3 version of the ALMA Observing Tool available through the [DDT proposal](#) page.

## Summary of documents and tools available for ALMA

### Call for Proposals

Documentation supporting the current ALMA Call for Proposals – **Cycle 4**. Documents from previous Cycles are provided [here](#).

- [ALMA Proposer's Guide](#) (Contains all pertinent information regarding the ALMA Call for Proposals)
- [ALMA Technical Handbook](#) (A comprehensive description of the ALMA observatory and its components)
- [ALMA Users' Policies](#) (The long-term core policies for use of the ALMA and ALMA data by the science community.)
- [Observing With ALMA - A Primer](#) (Introduction to interferometry and how to use ALMA)
- [ALMA Proposal Template](#) (LaTeX format. Recommended but not mandatory)
- [ALMA Proposal Review Process](#) (An updated ALMA Principles of the ALMA Proposal Review Process)

### Observing Tool (OT)

Documents and tools supporting the current ALMA Call for Proposals – **Cycle 4**.

The [ALMA Observing Tool \(OT\)](#) is a Java application used for the preparation and submission of ALMA Phase 1 (observing proposal) and Phase 2 (telescope runfiles for accepted proposals) materials. The current release of the OT is configured for Cycle 4 Capabilities of ALMA. Note that in order to submit proposals you will have to register with the ALMA Science Portal beforehand.

- [ALMA Observing Tool](#) (takes you to the OT page on the Science Portal)
- [OT Quickstart](#) (A Quick Start Guide for using the Observing Tool)
- [OT User Manual](#) (Describes how to use the Observing Tool for preparing ALMA proposals)
- [OT Reference Manual](#) (An in-depth description of the Observing Tool)
- [Video Tutorials](#) on how to use the Observing Tool
- [Known OT issues](#) (for those instances when OT problems are encountered)
- [A User's Guide to ALMA Scheduling Blocks](#) is a guide to understanding the structure and content of ALMA Scheduling Blocks (SBs) using the Observing Tool (OT). In particular this guide may be used by PIs when asked to verify and approve their SBs before they are placed in the queue, ready for observing.

### Guides to the ALMA Regional Centers

The ALMA Regional Centers provide user support and host special activities related to their respective regions. Their functions are described in the 'Guide to'.

- [Guide to the East Asian ARC](#)
- [Guide to the European ARC](#)
- [Guide to the North American ARC](#)

### ALMA Sensitivity Calculator (ASC)

The ALMA Sensitivity Calculator (ASC) will calculate the necessary integration times for a given sensitivity, or vice versa, for your ALMA observing project.

## Call for Proposals

The ALMA Director, on behalf of the Joint ALMA Observatory (JAO) and the partner organizations in East Asia, Europe, and North America, is pleased to announce the ALMA Cycle 4 Call for Proposals (CfP) for scientific observations to be scheduled from October 2016 to September 2017. It is anticipated that up to 3000 hours of the 12-m Array and up to 1800 hours of the Atacama Compact Array (ACA), also known as the Morita Array, will be available for successful proposals from Principal Investigators (PIs) in Cycle 4. Proposals must be prepared and submitted using the ALMA Observing Tool (OT), which is available for download from the ALMA Science Portal ([www.almascience.org](http://www.almascience.org)). Proposals will be assessed by competitive peer review by a single international review committee.

ALMA Cycle 4 proposal submission will open at:

**15:00 UT on Tuesday 22 March 2016.**

The ALMA Cycle 4 proposal submission deadline is:

**15:00 UT on Thursday 21 April 2016.**

Table 1 summarizes these and other important milestones for Cycle 4.

ALMA provides continuum and spectral line capabilities for wavelengths from 0.32 mm to 3.6 mm, and for angular resolutions from 0.024" to 3.7" on the 12-m Array. Cycle 4 offers several new technical capabilities, including Solar, millimeter-wavelength Very Long Baseline Interferometry (mm VLBI), spectral-line linear polarization, and ACA stand-alone observations. In addition, for the first time ALMA will accept Large Proposals, which are programs that request more than 50 hours of time on the 12-m Array or the ACA in stand-alone mode to address key scientific questions. Up to 15% of the available time will be allocated to Large Proposals.

The [Proposer's Guide](#) provides all the necessary information needed for submitting proposals including an overview of the types of proposals offered in Cycle 4 (Section. 4), information on planning (Section. 5) and submitting (Section. 6) proposals, and an overview of technical capabilities (Appendix A). Investigators are also strongly encouraged to review the [ALMA User's Policies](#) which describe the long term core policies used by ALMA and describes the policies for proposal change requests and the requirements for the use of ALMA data. Questions about proposal preparation and submission, data use or general ALMA policies should be submitted through the [ALMA Helpdesk](#).

## Preparation of the “Scheduling Block” SB

### Until cycle 3:

- Each project has a **contact scientist “CS”** and a **“P2G”** assigned
- **Science Block “SB”** prepared by “batch” along the year, according to the antenna configuration schedule
- **SB** prepared by the **P2G** (Phase 2 Generator) at ESO
- Send to the **CS** (contact scientist) in an ARC node
- The **CS** check the file, ask question give comments to the **P2G**, then send the file to the **PI**
- **PI** check the file, comments, ask questions to the **CS**
- The **CS** reply to the **PI**, or transmit the question to ESO, or ask the **PI** to do a “change request” via the helpdesk
- When the **PI** is happy, **CS** ask **P2G** to submit the file to the archive i.e. the project is in the observing queue!

## Preparation of the “Scheduling Block” SB

### From cycle 4:

- All project prepared in 1 batch
- **PI** of “standard” project generate the **SB** thanks to the **OT**
  - Minor change by the PI
  - Major change by P2G, after “change request” (HD)
- **CS** assigned to each project,  
cannot access the files, check only on PI request
- **Hard deadline mid of September (project downgraded)**

# Phase II : OT

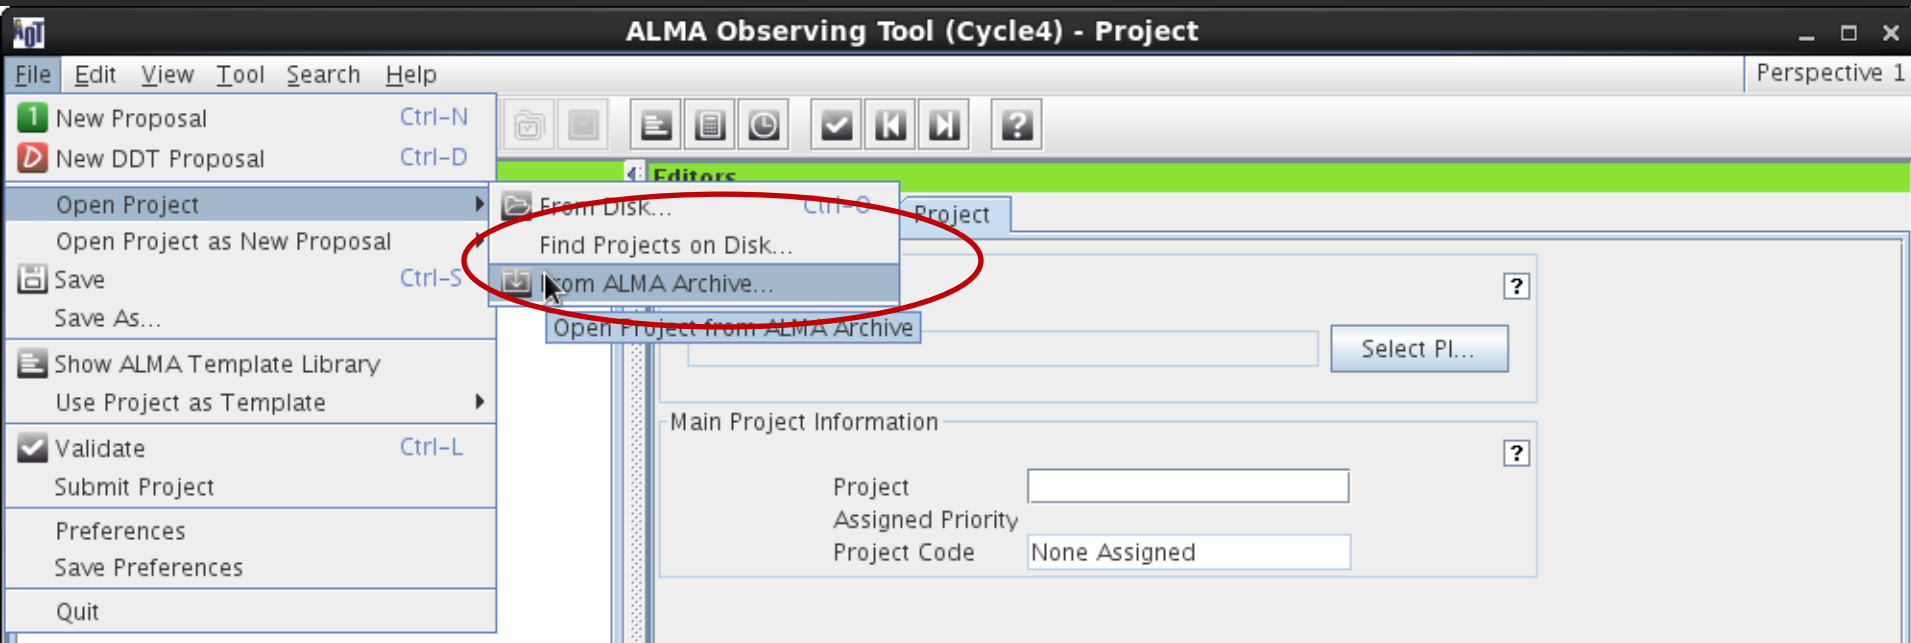

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## With the OT

Get the \*.aot file

- from your CS (via Helpdesk) up to cycle 3
- From the archive (via OT, file > open project > From ALMA archive)

# Phase II : OT

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## With the OT

Get the \*.aot file

- from your CS (via Helpdesk) up to cycle 3
- From the archive (via OT, file > open project > From ALMA archive)

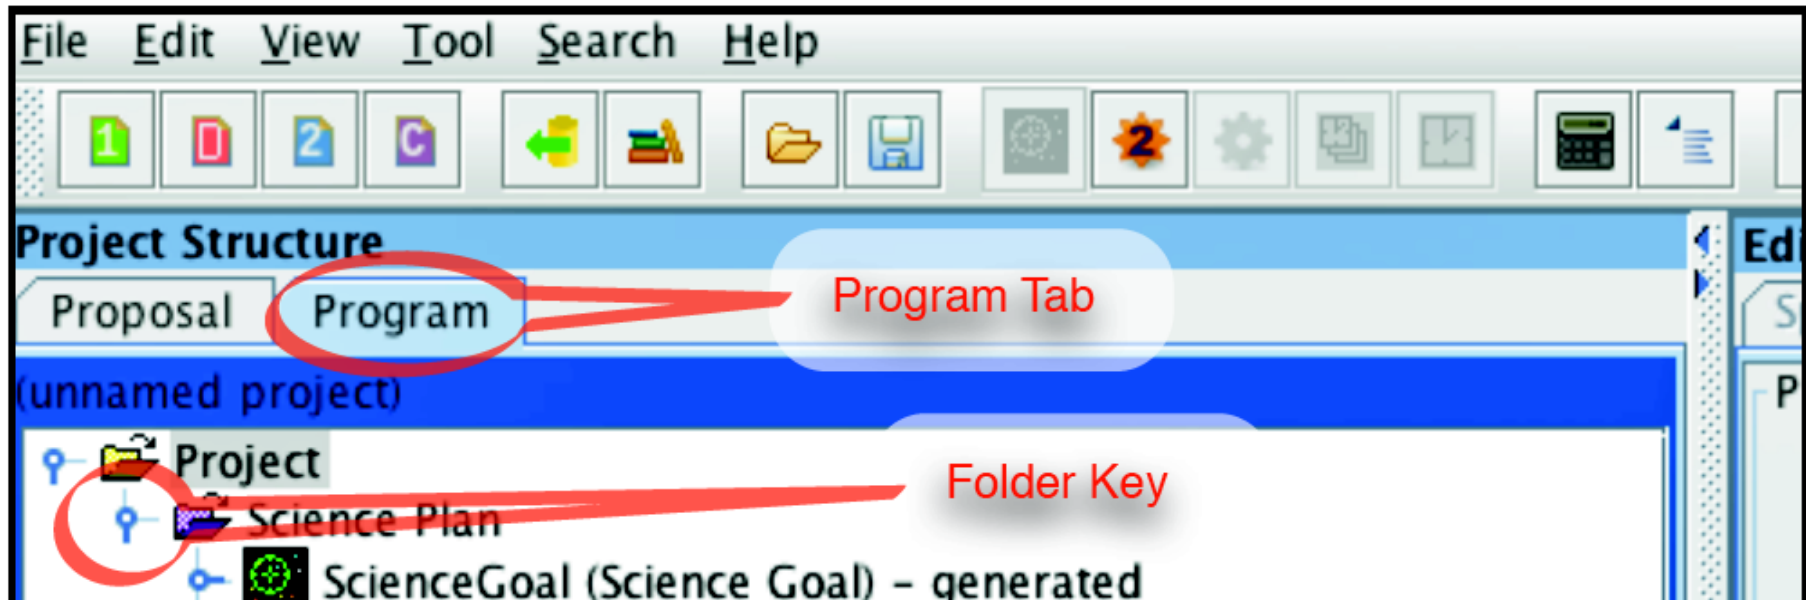

Figure 3: The “Program” tab (circled) contains the files generated at Phase 2, including the SBs. Clicking the folder key symbol exposes or hides the contents of the file. Right-clicking the key symbol and selecting “Expand all” allows you to see all the files under that key.

# Phase II : OT

## Phase 2

### Phase 2 generation for Cycle 4

All Projects approved for observations with ALMA need to go through the Phase 2 generation. ***In Cycle 4, PIs of approved ALMA Projects are responsible for generating and submitting Phase 2 Scheduling Blocks (SBs). The Phase 2 submission deadline is September 15, 2016 at 1500 UT.*** Shortly after receiving the notification letters, PIs of approved projects are contacted by ALMA via a Helpdesk ticket. Any necessary communication between the PI and ALMA concerning the approved project should proceed by replying to this Helpdesk ticket. The only exception is for official change requests, which require an official change request ticket to be opened. The Project Helpdesk ticket is assigned to a Contact Scientist who will be happy to assist with any queries that may arise. However, it is in no way mandatory to reply to the Helpdesk ticket if the PI is able to generate and submit the Phase 2 products to their satisfaction.

PIs of approved Projects should consult the following references:

- [Phase 2 QuickStart Guide](#) provides instructions on generating and submitting Phase 2 SBs.
- [User's Guide to ALMA Scheduling Blocks](#) describes how to understand the structure and content of ALMA Scheduling Blocks (SBs) using the Observing Tool (OT).

Users may also reference the [ALMA Proposer's Guide](#) and the [ALMA Technical Handbook](#) for the present Cycle.

# Phase II : documentation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

**Doc 4.19, ver. 1** | 2 August, 2016

## **A User's Guide to ALMA Scheduling Blocks (Cycle 4)**

# During observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- For each SB (i.e. 1 freq /source/ant.conf), first status = **“READY”**
- 1 observation = 1 EB,
  - After each EB : **QA0** (sanity check)
  - When the requested # of QA0 PASS EB is reached  
→ **“fullyObserved”**
  - Then go to **QA2**
    - Standard projects calibration with the **pipeline** at JAO
    - Others calibrated **“by hand”** at the ARC (nodes)
    - **Images still by hand** at the ARC (nodes)
    - DRM (Data Reduction Manager) at ARC decide if it is PASS or FAIL  
Pipeline should do more and more
  - If FAIL go back to the observation queue
  - If PASS delivered to PI status **“delivered”**

# After observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

One of your SB is observed (i.e. not necessary all your project!)

- Proprietary period start the day of delivery, i.e. is **different for each SB**
- Delivered data consist of a tree of directories:  
For each SB :
  - Raw data (asdm format) **“raw”** [optional]
  - Calibration and imaging scripts used for the QA2 **“script”**
  - Plots made during the QA2 **“qa”**
  - Images **“product”**
  - Calibration table **“calibration”**

# After observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

One of your SB is observed (i.e. not necessary all your project!)

- Proprietary period start the day of delivery, i.e. is **different for each SB**
- Delivered data consist of a tree of directories:

When the reduction is done by the pipeline:

- The scripts are non human readable
- The plots are stored in an html “weblog”
- The tree and the plots change from a version of the pipeline to an other

# After observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- You may want to check the calibration, and/or redo imaging
- You need to rerun the calibration scripts to have the calibrated visibilities, using the SAME CASA version used by the QA2 (not always the same for all SB)
- To get some help :
  - CASA guides [casaguides.nrao.edu](http://casaguides.nrao.edu)
  - Question to the helpdesk
  - do a F2F visit in an ARC node (you can choose a different node from your CS or “standard” affiliation)
- In case of problem, ask for re-reduction and/or re-observation via the helpdesk = QA3

# After observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- Do not believe blindly the data delivery!
  - Calibration problems (less and less)
  - Too much flagging
    - Could flag your line of interest
  - “Quick and dirty” imaging (**human pipeline** best effort basis)
  - Only the main scientific target (source and line) are imaged, but data are often much more rich

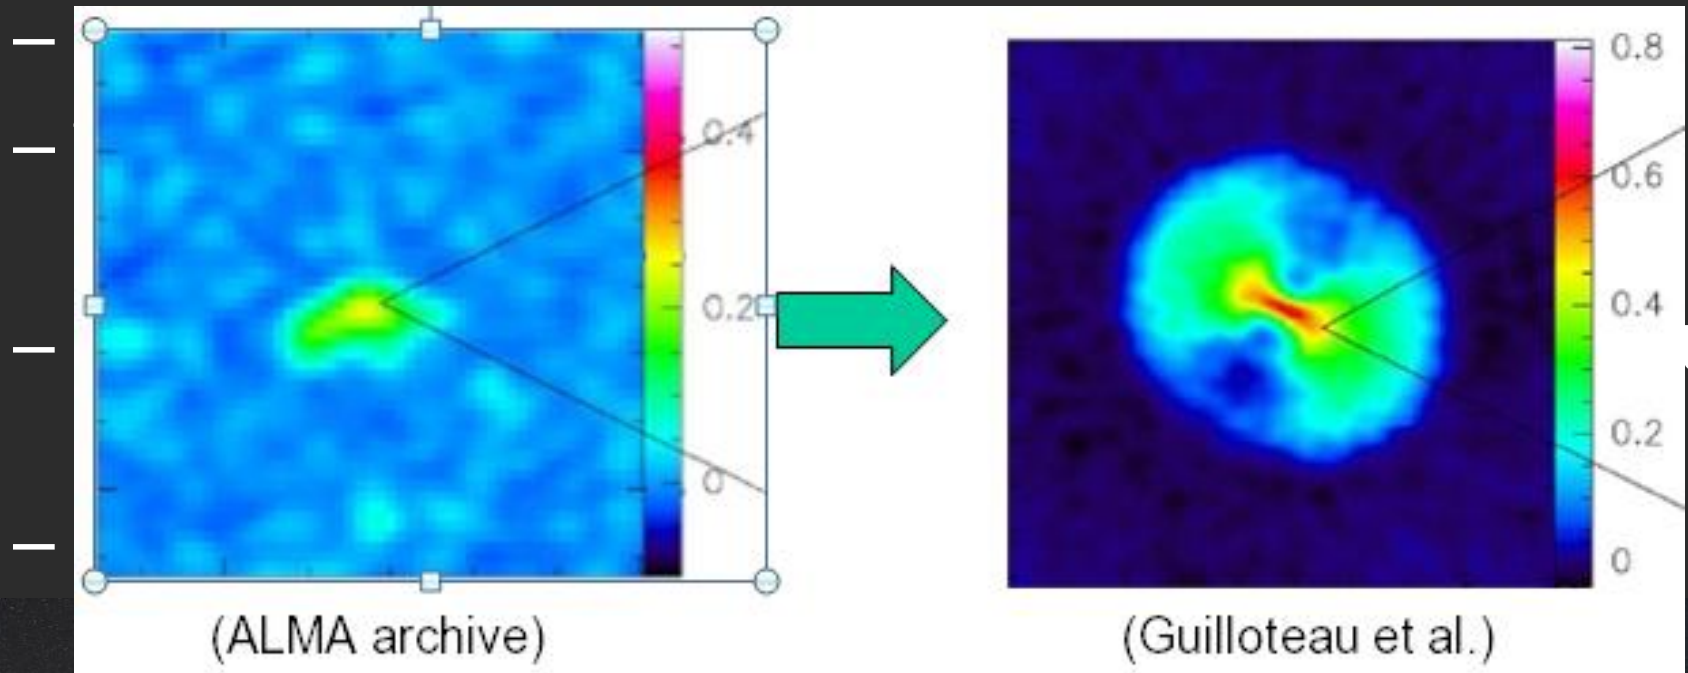

# After observation

EUROPEAN ARC  
ALMA Regional Centre || IRAM

- Do not believe blindly the data delivery!

- Do a careful imaging (e.g. self-calibration)

# The ALMA observatory

EUROPEAN ARC

ALMA Regional Centre || IRAM

# Filler CASA-GILDAS

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

To have a gateway to be able to :

- View and analyze images
  - from CASA into GILDAS
  - from GILDAS into CASA
- Make operations on visibilities
  - from CASA with GILDAS (**not straightforward**)
  - From GILDAS with CASA
- Thanks to (UV)FITS
- **Calibration is done in the corresponding software**  
(CASA for ALMA, GILDAS/CLIC for NOEMA)

# Filler CASA- GILDAS

EUROPEAN ARC

ALMA Regional Centre || IRAM

## Why?

- Users are used to some software
- Users have developed dedicated tools in one software
- Analysis of data coming from different instruments

## Why in GILDAS?

- Imaging faster (and better in some cases)
- Access to specific data reduction and analysis tools
  - Short-spacing inclusion: 30m+ALMA
- Publication-quality plots

## Also available

- ALMA imaging simulator
- ASTRO tools for correlator setup

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Difference of philosophy

### CASA

- Topocentric frame
- No source systemic velocity
- 2 polarizations
- Everything done in one software, complex data
- 1file contains everything
- Mosaic: 1 file include all the fields

### GILDAS

- LSR in source frame
- Source systemic velocity
- polarization
- Calibration/imaging independent steps
- Header + data file
- Mosaic: 1 file per field

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Images CASA → GILDAS

- “QA2” product (i.e. observatory delivery) images are in LSRK or BARYCENTRIC frame
- “QA2” product fits image are in “frequency” mode
- **casa> exportfits (image = ‘my-image.image’,  
fitsimage = ‘my-image.fits’, velocity=T)**
- **Mapping> let name my-image**
- **Mapping> let type fits**
- **Mapping> go bit / go map / go view**

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Images GILDAS → CASA

- Frame : LSR from the source
- **Mapping > fits my-image.fits from my-image.gdf**
- **CASA> importfits(fitsimage= 'my-image.fits',  
imagenname= 'my-image.image')**

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Visibilities CASA → GILDAS

- split 1 file per field and per spw, without the flags

```
CASA> split(vis='calibrated.ms', outputvis='field1-spw0.ms',  
            field = '1', spw='0', keepflags=F)
```

Option **datacolumn** CORRECTED or DATA

- Correct for TOPO to LSR or BARY

```
CASA> cvel(vis='field1-spw0.ms', outputvis='field1-spw0-cvel.ms',  
           outframe='LSRK', restfreq='245.8GHz')
```

- Export

```
CASA> exportuvfits(vis='field1-spw0-cvel.ms',  
                  fitsfile='field1-sp0.uvfits', multisource=F)
```

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Visibilities CASA → GILDAS

```
MAPPING> @fits_to_uvt field1-spw0 field1-spw0  
[FREQUENCY 238500 VELOCITY 6 LINE CO]
```

1. uvfits name without extension (should be uvfits)
2. uvt name without extension (will be uvt)
3. Rest frequency in MHz (optional)
4. Source systemic velocity in km/s (optional)
5. Line name (optional)

# Filler CASA- GILDAS

EUROPEAN ARC  
ALMA Regional Centre || IRAM

## Visibilities CASA → GILDAS

In details, `fits_to_uvt` do:

- Convert uvfits to uvt (fits /style casa)
- Extracting/collapsing the polarization (uv\_splitpolar)
- Re-calculate the weights (uv\_noise)
- Exclude points with “unusual” weight (uv\_trim)
- Recalculate the velocity axis according to the source systemic velocity (modify)
- Other “details” (source coordinates ...)

# Filler CASA- GILDAS

EUROPEAN ARC

ALMA Regional Centre || IRAM

## Visibilities CASA → GILDAS

```
MAPPING> @fits_to_uvt field1-spw0 field1-spw0  
[FREQUENCY 238500 VELOCITY 6 LINE CO]
```

IF you have this problem:

## IRAM ARC Node

IRAM has established an ALMA user support center, which forms a node of the [European ALMA Regional Center \(ARC\)](#). The ARC nodes are providing support to the community in the preparation of ALMA observations and in data processing and analysis. [More about the IRAM ARC node.](#)

## IRAM Memo 2014-?

### From CASA to GILDAS I - GILDAS Data Format Version 2

S. Guilloteau<sup>1</sup>, E. Chapillon<sup>1,2</sup>, F. Gueth<sup>2</sup>, G. Dumas<sup>2</sup>

1. LAB (Bordeaux) 2. IRAM (Grenoble)

October 20, 2014– version 2.0

#### Abstract

With the advent of ALMA, IRAM users may prefer at some point to handle their ALMA data in GILDAS rather than in CASA<sup>1</sup>, vice versa to handle IRAM data into CASA. This document describes the different ways to do so, and what are the benefits and limitations of the process. This document only covers calibrated data, either UV data or images. There is (currently) no plan to handle uncalibrated
